(a) Throughput vs concurrency
time-cut
count-cut
MaxMessageCount = 10
Throughput (TPS)
Client concurrency
(b) Ack stages, c=8 vs c=10
policy
fabric (private commit)
outbox insert
policy is 3.38 ms: too thin to see
Ack latency (ms)
all public
all sensitive
mixed
fabric only
(c) Outbox insertion
never dominant: 273.5 ms of a 5689.2 ms ack at c=32 (4.8%)
control: never collected by the relay
Outbox insertion (ms)
Client concurrency
all_public
all_sensitive
mixed
fabric_only (control, no anchor)
